

CTX-200/GR ClorShock

DESCRIPTION:

Fast-dissolving organic compound, stabilized for the treatment of pool water.

PROPERTIES:

Appearance	Granular solid
Colour.....	White
Available chlorine	55 – 60%
pH (1%)	6 – 7
Solubility at 20°C	30 g/100 ml

CHARACTERISTICS:

Owing to its high solubility in water the required quantity of residual chlorine is rapidly obtained.

It is especially suitable for the disinfection of pool made of polyester or vinyl because this product don't discolours these surfaces.

The ease with which it dissolves in water, means the disinfection of the pool water may be automated using a metering pump.

The free residual chlorine obtained in the water offer higher stability against ultra-violet light.

Does not alter the pH of the pool water.

DOSAGE AND INSTRUCTIONS FOR USE:

Initial Treatment: Add 15 grs. of product (0200GR) per m³ of water. Wait for two hours before adjusting the pH level between 7,2 – 7,6 using either Solid pH Reducer (0010) or pH Enhancer (0020).

Maintenance Treatment: Once the pH level of the water has been adjusted, add from 1-3 grams of product (0200GR) for m³ of water daily.

Product Technical data sheet

This dose is merely meant as a guideline and may be modified according to differing characteristics of the pool or climate.

The Initial treatment (Super chlorination) should be repeated whenever the water does not appear transparent.

Introduce the necessary dose of product inside the skimmers and then turn on the filter equipment; in this way the product will dissolve when it begins to move through the skimmers.

It is also possible to pour the dose of product equally over the surface of the swimming pool, preferably during the evening and when there are no swimmers in the pool.

The level of free residual chlorine should be between 0,5 – 2 mg/l. This level is easily determined using a chlorine and pH test, and should be measured at least twice daily.
